

TrainingRegister® Basic Version - Price List

Revised: June 19, 2008. Subject to Change without notice.

TrainingRegister® Basic provides an affordable annually renewable license for budget conscious organizations.

Unlike the Full Featured Version, TrainingRegister® Basic is not available with a perpetual license. All data entered in the Basic Version can be easily upgraded to the Full Featured Version at any time. For a perpetual license or more features, see the full-featured version.

The TrainingRegister® Basic Version permits managing permanent training records for an unlimited number of participants and does not restrict the number of users. All data are stored in a furnished Jet database. The Jet database will be very adequate for smaller organizations with 1-3 concurrent training administrators. Unlike SQL Server, the performance slows with more concurrent users. A separate document is available to compare features between the two versions. The demo download will permit evaluating both the Full Featured and Basic versions with one installation.

Initial Startup Cost:

The initial license purchase will be invoiced for \$562.50. If you pay within 21 days of the invoice date you can earn a 20% discount making your net start up cost \$450.

Startup Fee – TrainingRegister® Basic	\$200
Annual License with Full Support Included	\$250
Total to get started	\$450

Annual License Renewal Cost:

The Basic version will expire or quit functioning if the license is not renewed on time. If it expires, another Startup Fee will be required.

The renewal invoice will be for \$450 with a \$200 discount if payment is received before the expiration date.

Upgrading to the Full Featured version of TrainingRegister®:

You may upgrade to the Full Featured version of TrainingRegister® at any time by purchasing the Full Featured version. Money spent on the Basic Version license will not be credited toward a Full Featured license.

All data will be transferable if your software is current. I.e. we can't promise the data will be transferable unless you stay updated with the most current version.

Annual Support Package

The Annual Support Package is included with the License for the Basic Version. Support is not available or sold on a per call basis. The Annual Support Package is designed to cover all upgrades and updates for products purchased and unlimited calls for 2 contact people.

Note: The Annual Support Package never includes travel, travel expenses or time away from the office. This is occasionally requested and very seldom needed. We have assisted with many installations and trained many users over the telephone. The Annual Support Package includes unlimited telephone support for 2 contact people plus upgrades and updates. Support for additional staff is available.

TrainingRegister® Upgrades

TrainingRegister® upgrades and updates for the same product are free if the Annual Support Package is current.

The Basic Version cannot be used with SQL Server. The Jet database and Microsoft Drivers are provided at no extra cost and separate database maintenance is not required.
